

MAHAMADOU NOURIDINE MAMOUDOU SOULEY

Full Stack Software Developer / Engineer

mahamadounouridinem@gmail.com · linkedin.com/in/mahamadou-nouridine · github.com/mahamadou-nouridine · nouridine.com
Niamey, Niger · Remote

SUMMARY

Full Stack Software Engineer with 3+ years of professional experience building and maintaining production web applications and the backends behind mobile clients. Skilled in RESTful API design, multi-tenant SaaS, configurable backend frameworks, relational and NoSQL databases and AWS deployments, with modern front-end frameworks (React, Next.js, Blazor). Comfortable across the full delivery cycle: coding, code review, debugging, CI/CD and collaboration with product managers and designers in Agile, cross-border teams. Integrates AI coding assistants into the development workflow for prototyping, debugging, code review support and documentation, while owning design decisions and reviewing everything that ships.

PROFESSIONAL EXPERIENCE

Full Stack Software Engineer

02/2025 – Present

Gabera — Niger / Switzerland / Liechtenstein

- Developed front-end and back-end components of AGPP (Auto-Generated Pro-Code Platform), a platform that generates configurable business applications.
- Designed and implemented a database-agnostic reporting framework in C# with a unified adapter architecture supporting PostgreSQL, MySQL, MongoDB and SQL Server, exposed through RESTful APIs.
- Built configurable reporting capabilities (data selection, aggregations, grouping, sorting, filtering) and RESTful APIs connecting the framework to multiple database systems, ensuring data integrity across sources.
- Integrated the reporting and BPMN frameworks into the application-generation pipeline, enabling generated applications to run configurable reports and business workflows.
- Built responsive front-end interfaces (Blazor/.NET MAUI) for configuring and using these features; debugged and optimized applications to improve reliability and performance.
- Participated in code reviews and collaborated with product and engineering teams within an Agile workflow.
- Used AI coding assistants to speed up prototyping, debugging and documentation of the reporting framework and UI components, reviewing and testing all generated code before merging.

Freelance Full Stack Engineer

10/2023 – 02/2025

Remote — selected clients

- **Kano VTC:** built a ride-hailing (VTC) platform made of two mobile clients and a web back-office, using Next.js and NestJS on AWS (Lambda, Cognito) with Docker and Stripe payment integration.
- **LIDAN:** designed and built a criminal-record issuing system for government use with Next.js, NestJS and PostgreSQL, including role-based access control, secure RESTful APIs, query optimization and caching, and unit and integration tests.
- **Caly:** took a partially built beauty-booking platform to production on AWS (EC2, S3), rebuilding it in Next.js, React and TypeScript with Firebase authentication, Google Maps geolocation, and TanStack Query / React Hook Form / Zod for state and validation.

Full Stack Software Engineer

12/2023 – 02/2024

LegalTech Priorities — Niger

- Built a multi-tenant SaaS application end to end for secure case management using React, Next.js, TypeScript, NestJS and MongoDB.
- Designed RESTful APIs and real-time case-status features; implemented authentication, authorization and tenant-level data isolation.
- Investigated production issues and added logging and monitoring to improve reliability and troubleshooting.
- Used AI coding assistants to accelerate API and front-end implementation and to explore interface options before finalizing designs.

Full Stack Developer

07/2022 – 03/2023

CodeLoccol — Niger

- Built and maintained a MERN learning platform (React, Node.js, Express, MongoDB) used by 100+ users, covering project submissions, peer evaluations and progress tracking, plus school-admission and program-management systems.
- Developed and maintained RESTful APIs with request validation, error handling and database access; built a Node.js Discord bot to automate student supervision and monitor real-time activity.
- Participated in code reviews and applied clean, well-documented, testable coding practices throughout development.

Full Stack Developer & Data Engineer

11/2022 – 12/2022

UNESCO-India-Africa Hackathon 2022 — India

- Represented Niger as a finalist among 100 teams from 23 countries with a Python-based energy-consumption analysis solution.
- Built data extraction and processing pipelines using satellite imagery and the Google Earth Engine API.
- Contributed to front-end and back-end development of the team's presentation platform under a 36-hour deadline.

PROJECTS

- **Vendora — Sales Management SaaS** (Next.js, TypeScript, MongoDB): multi-tenant sales and inventory app with dashboards for sales, revenue, stock and per-vendor performance, and transactional workflows that keep inventory consistent.
- **NourForm — Form Builder & Payments** (Next.js, TypeScript, React): SaaS form builder with configuration and fill-out interfaces and integrated mobile-money and card payments.

TECHNICAL SKILLS

Front-End: React, Next.js, TypeScript, JavaScript, Redux, TanStack Query, Tailwind CSS, shadcn/ui, Blazor, .NET MAUI, HTML5, CSS3

Back-End: Node.js, NestJS, Express.js, C#, .NET, RESTful API design, authentication & role-based access, Microservices concepts

Databases: PostgreSQL, MySQL, SQL Server, MongoDB

Cloud & DevOps: AWS (EC2, S3, Lambda, Cognito), Docker, CI/CD, GitHub Actions, Firebase, Vercel, Stripe

AI-Assisted Development: AI coding assistants for prototyping, debugging, refactoring, test and documentation drafts; code review of generated output

Practices: Git, Postman, Unit & Integration Testing, Code Review, Agile/Scrum, Debugging, Performance Optimization

EDUCATION, TRAINING & MENTORING

Full-Stack Developer — Computer Software Engineering

03/2023 – 03/2024

Microverse — Remote

- 1,300+ hours of full-stack development covering algorithms, data structures, Ruby on Rails, JavaScript, React and Redux.
- Developed software through remote pair programming, code reviews and Git-based workflows.

MERN Full-Stack Developer

01/2022 – 01/2023

CodeLoccol — Niamey, Niger

- 2,600+ hours of hands-on, project-based training in MongoDB, Express.js, React and Node.js.

Intensive Pre-Engineering Foundation Program (MP)

01/2020 – 12/2022

Université Tunisienne Internationale — Niamey, Niger

- Intensive mathematics, physics and engineering curriculum.

Technical Mentor (volunteer)

2023 – 2024

Microverse and CodeLoccol

- Mentored junior developers through weekly code reviews, debugging sessions and guidance on best practices.
